Terminology

MIC: Mortgage Investment Corporation as defined by the Canadian Revenue Agency (CRA)

Loan to Value (LTV): The primary risk metric in the mortgage industry. It represents the total loans owing divided by the value of the property (at the time the mortgage was issued). For example, assume a client has a property worth $750k. The same client has a 1st mortgage of $300k and a 2nd mortgage of $100k. The LTVs would be as follows:

1st Mortgage LTV: \[
\frac{300,000}{750,000} = 40.00\%
\]

2nd Mortgage LTV: \[
\frac{(300,000 + 100,000)}{750,000} = 53.33\%
\]

Loss Provision: The annual amount of profit held back in order to protect the portfolio from future losses.

Annual Return: Always net to shareholder (i.e. after our financial services fee).

Mortgage Origination Strategy

- Critical to any mortgage fund’s success is its ability to source high quality loans. Most industry mortgage funds rely on its relationship with 3rd party mortgage brokers to source their mortgages.

- Manchester’s strategy is unique in that it bypasses the “middle man” and goes direct to borrowers via its Financial Services provider: Alpine Credits.

- Alpine Credits has been involved in the private mortgage market since 1969.
  - Recognized brand with significant advertising budget focused exclusively on private mortgages.
  - Proprietary IT & business systems.
  - Over 90 employees in a central location allowing for economies of scale to administer a very large volume of loans.
  - “Geographically Agnostic” marketing strategy - allowing Alpine Credits to shift markets based on current market conditions:
    - Advertising can be used in any province.
    - Loans officers are licensed in multiple provinces.

This relationship with Alpine Credits provides Manchester with a distinct competitive advantage over other Private Mortgage funds.
Portfolio Composition

- 100% of the portfolio is secured against residential real estate.
- The fund concentrates on first mortgages and lower LTV second mortgages.
